

User pressed the "Add button" (blue one with "+"). Clicking on map will add new point. No package selected, so "selected package" control is dissabled

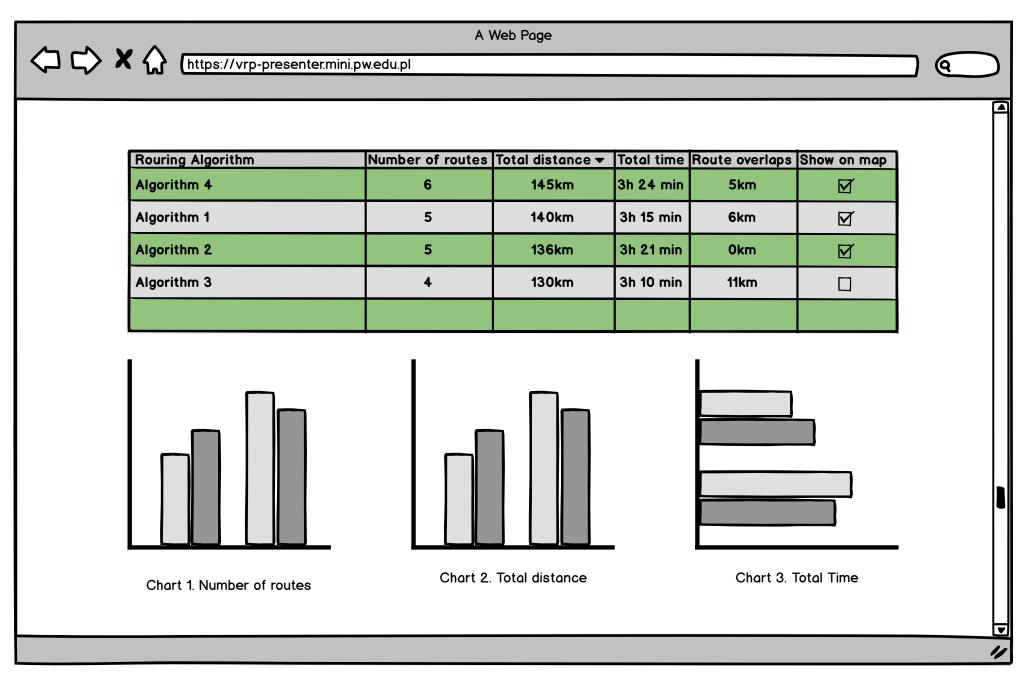

User selected one of point on map. This point changed color, and corresponding list item was highlighted. "Selected package" contoller can be used to modify this point

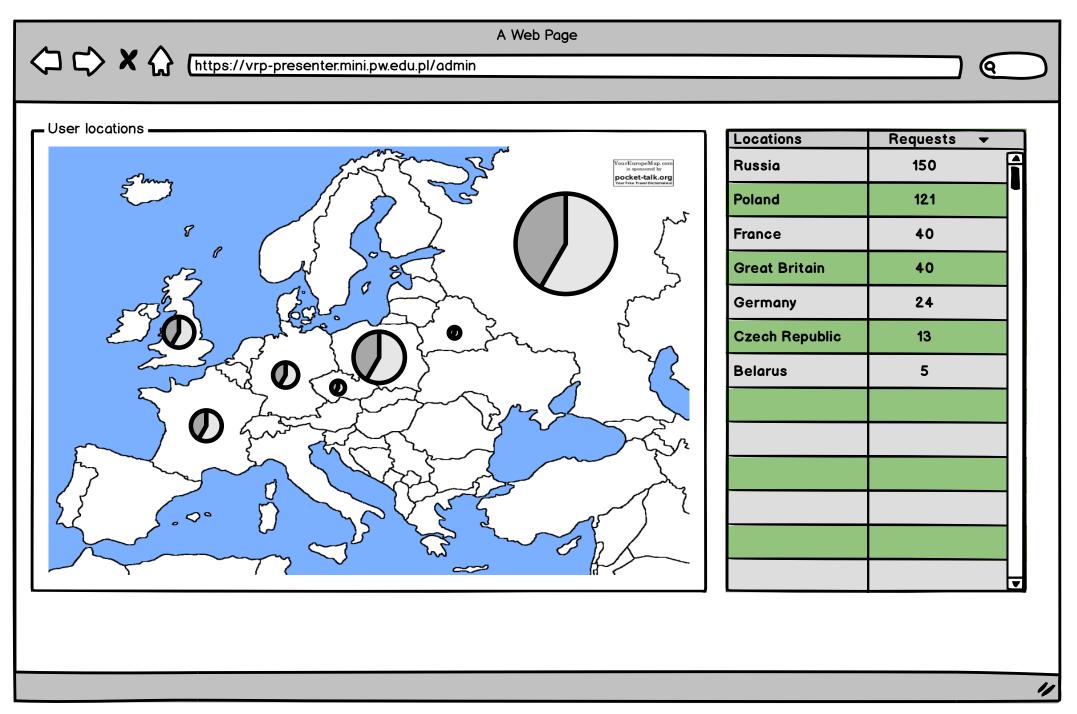

User clicked "Add base" button (brown button with home icon) and then specified where on map base should be.

[&]quot;Start routing" is disabled, as there is no packages

When "Start routing" is clicked, data in table on the same page fills asynchronously, as diffrent algorithms are executed. When all data is collected, some charts appear.

This is shown on the same page as map control

Admin page contains map, on which login location summary is presented. For diffrent zooms of map, diffrent granularity is used. Here is shown "per country" granulirity.
